Address: Else Alfelts vej 52E, 4 th. 2300
Copenhagen S

About me

I am originally from Rutsker, a very small town on Bornholm, we moved about a lot so I have lived on most of the rest of the island too. When I was ten, I moved to Malaga, Spain with my siblings and parents. Once there I started Spanish primary school and went on to complete secondary school too. In the middle of Bachillerato, the Spanish equivalent to College or High school, my grandmother died. My grandfather was infirm after my grandmothers passing and long-term illness and I had always planned to return to Denmark for university, so I quit Bachillerato and moved back to Denmark to continue my studies and take care of my grandfather.

Upon returning to Denmark I started to look for a line of education that suited me. For years I had been building computers and been interested in getting further involved in the inner workings of computers so the EUX program as a Data technician with a speciality in programming, spoke to me, I could finish my college diploma and at the same time learn a trade which interested me.

I am now in my second, almost third, year of my studies and I am enjoying it, gone are the preconceived notions of learning to code so I could make video games and replacing them is the knowledge that I can make anything with code. I have worked with databases, object-oriented languages, Client-side web applications, servers and much more.

I do not know what is going to happen in the future but what I do know is that once I complete my diploma as a Data Technician I want to specialize, I cannot say in what yet specifically yet but I do know that I want to continue learning.

Education

2020

TEC Ballerup - Work experience centre - P2 - Now

2019

TEC Ballerup - Main course 1

TEC Hvidovre - Work experience centre - P1
